README.md

```
Mar Vincent G. Inoy
AN41

---  Machine Problem 1  ---

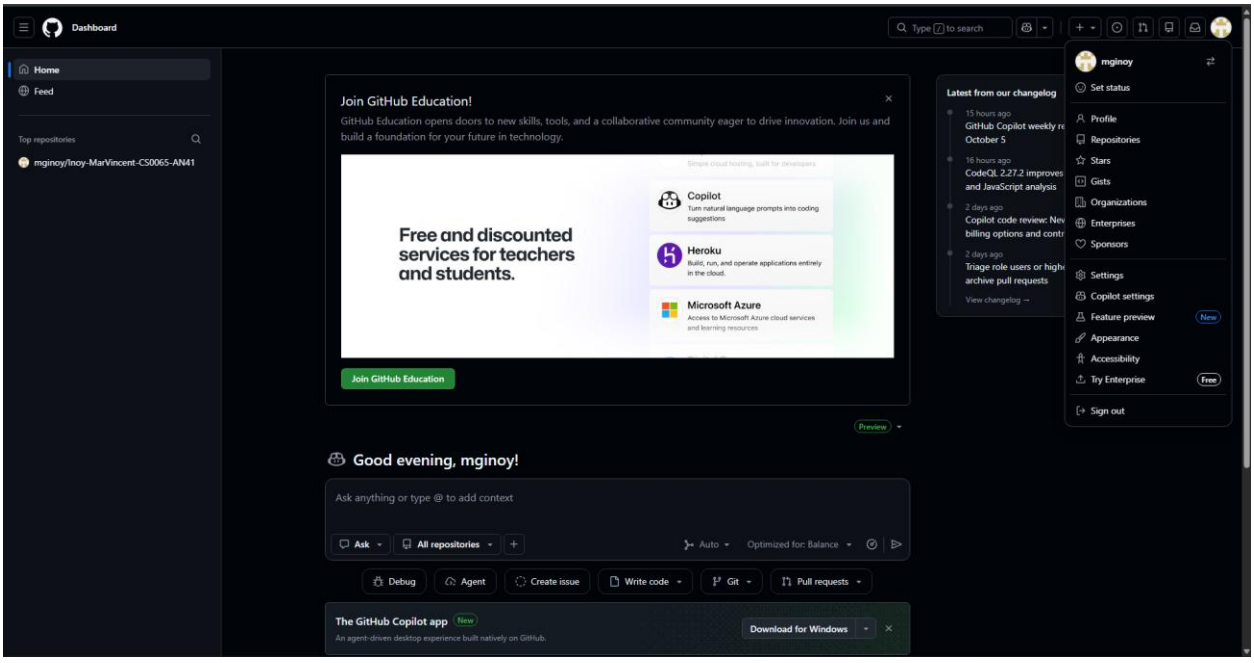

This repository contains the required output for Asynchronous Activity
1. The project uses KNIME to predict student risk status from academic performance data.

---  Files  ---
- Machine Problem 1 - StudentPerformancePrediction.knwf  --  Exported Knime Project
- student_performance_knime.csv -- The dataset used for the Knime Project

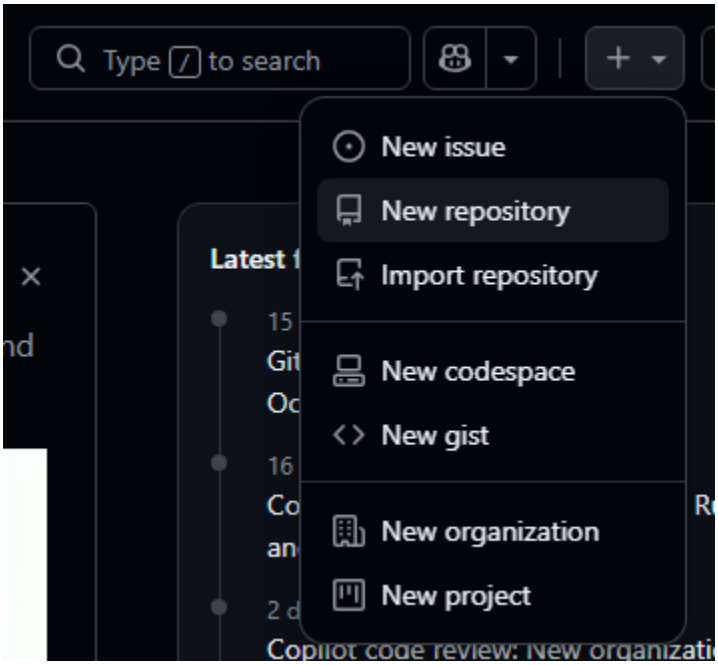

--- Algorithms  ---
- Decision Tree
- Logistic Regression
- Random Forest

---  How to Open  ---
1. Import "Machine Problem 1 - StudentPerformancePrediction.knwf" file into KNIME Analytics Platform.
2. Make sure to use the CSV file provided
3. Execute all nodes.
```

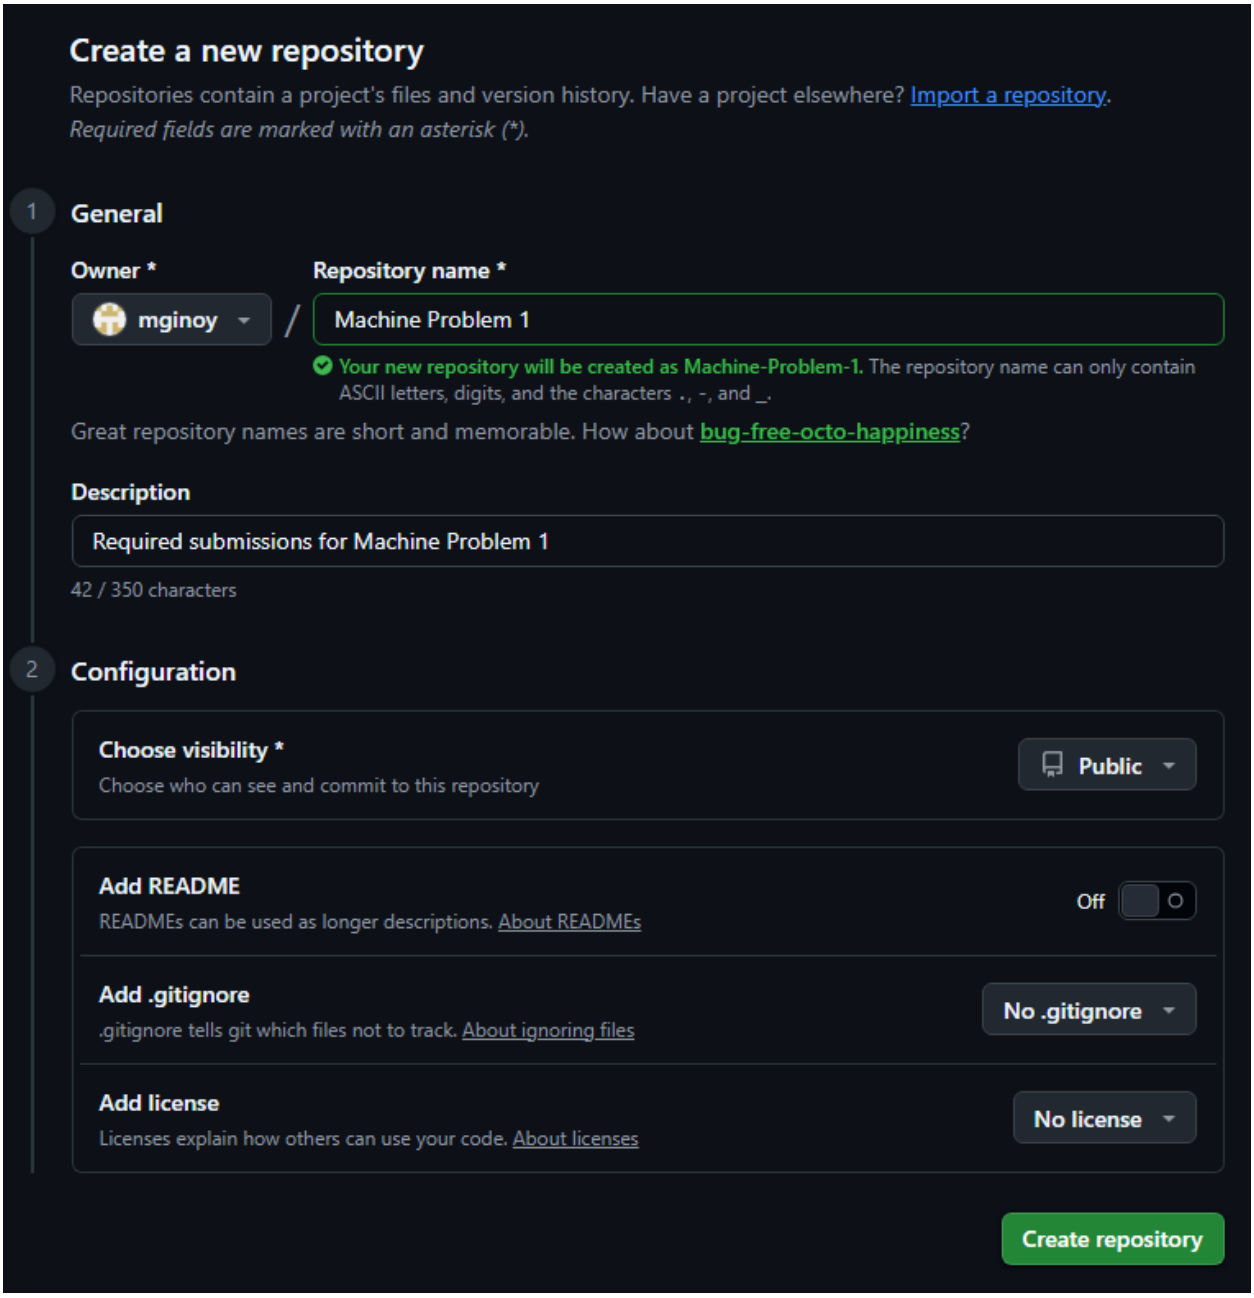

Wrote a README file here

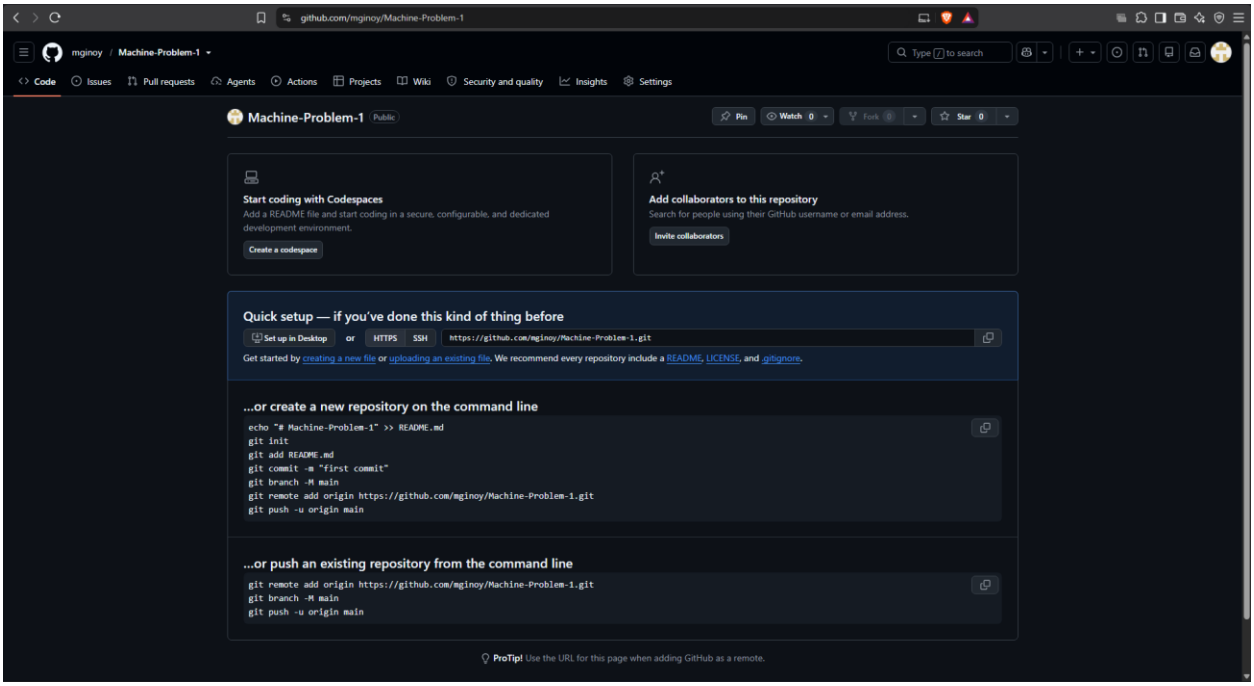

Logged in to github using the student email

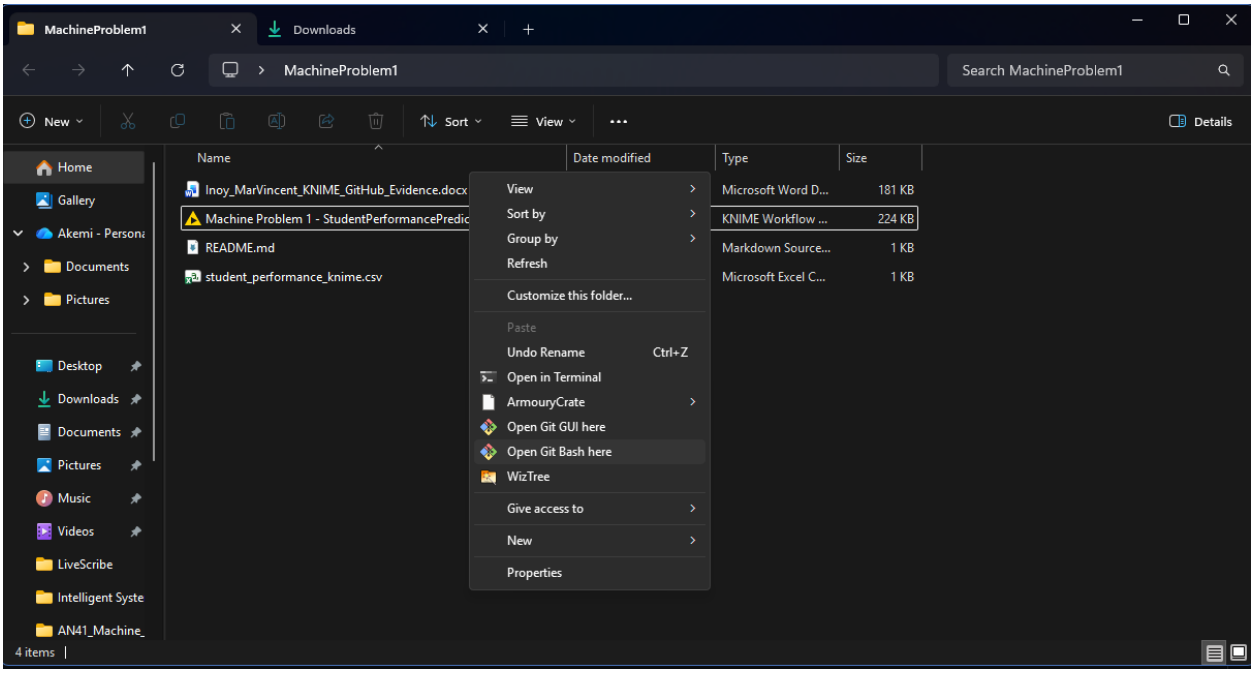

Clicked the + button then new repository

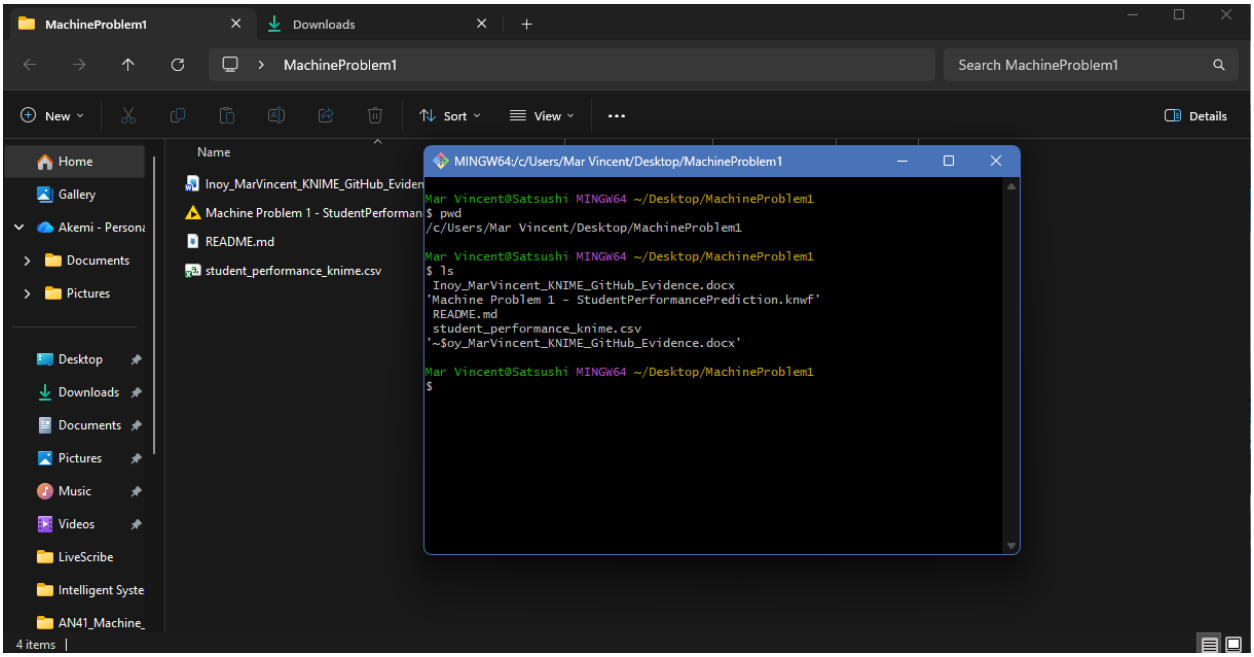

Filled up the name and description then Create Repository

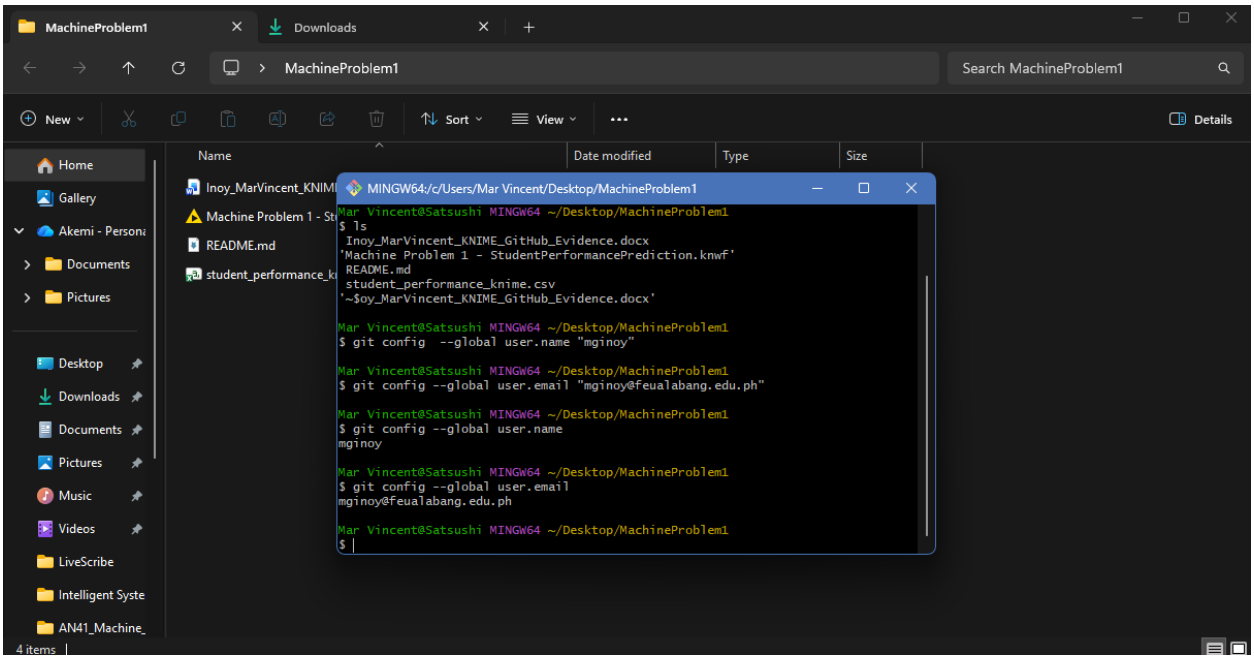

Then the repository is made, we copy the link

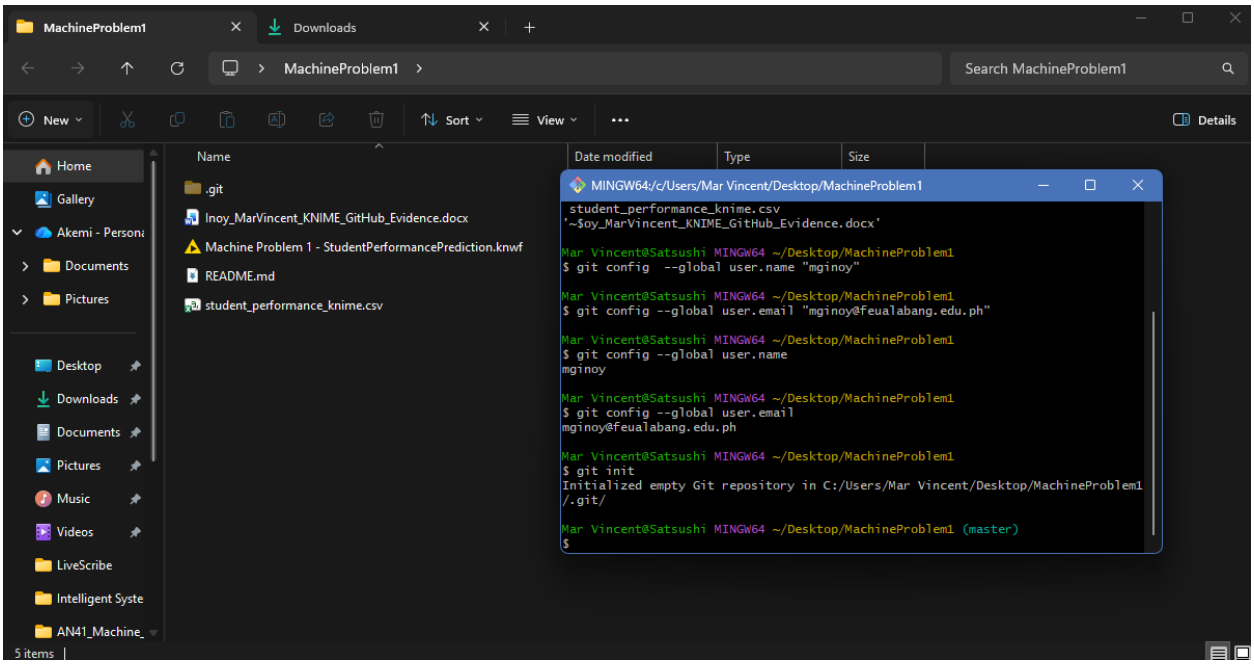

Going back to the project folder, right clicking anywhere then click Git Bash

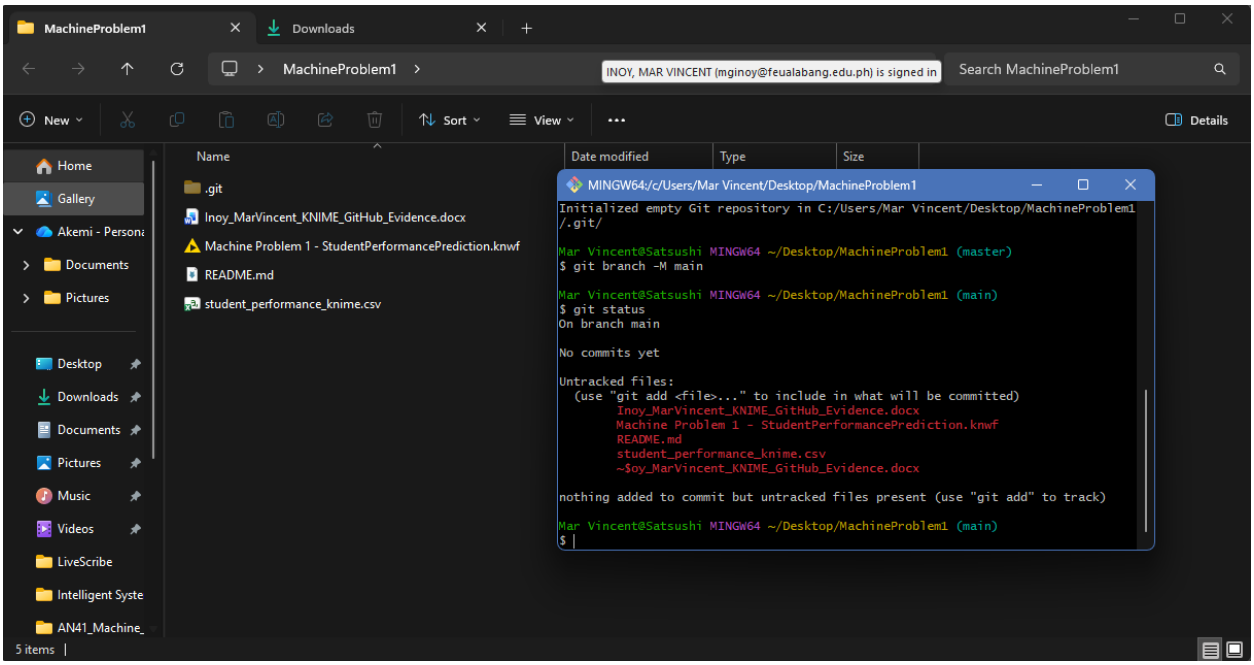

After opening gitbash, we types pwd and ls

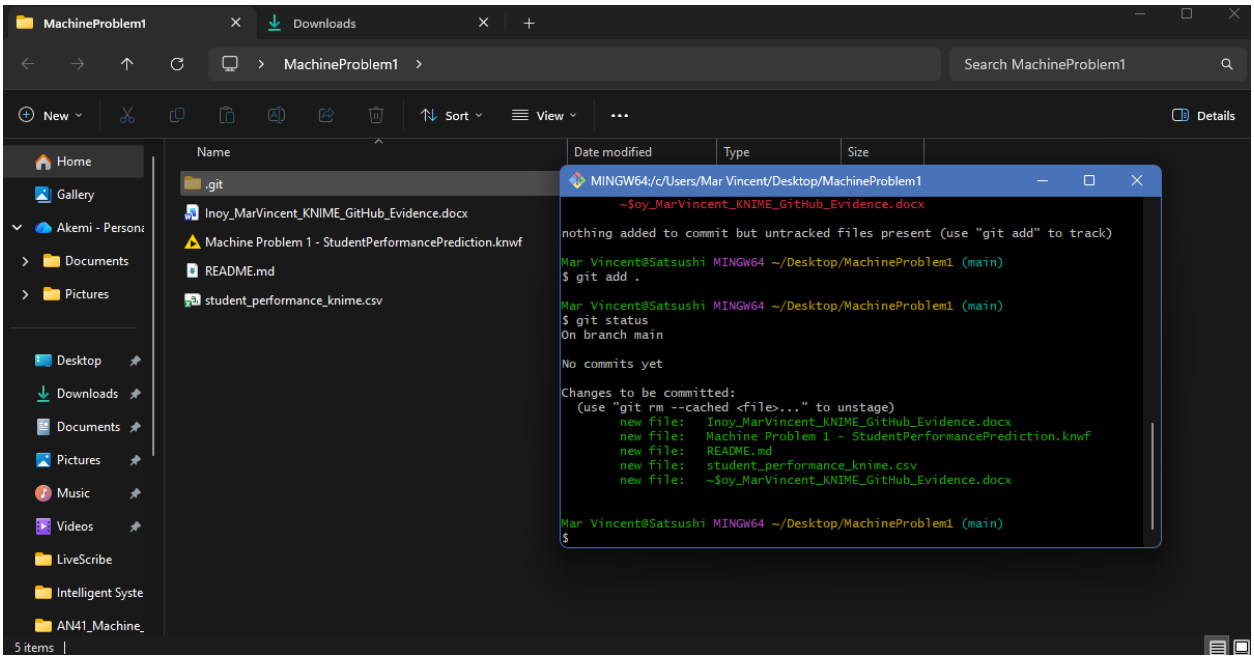

Next used git config to put user.name and user.email while confirming it as well

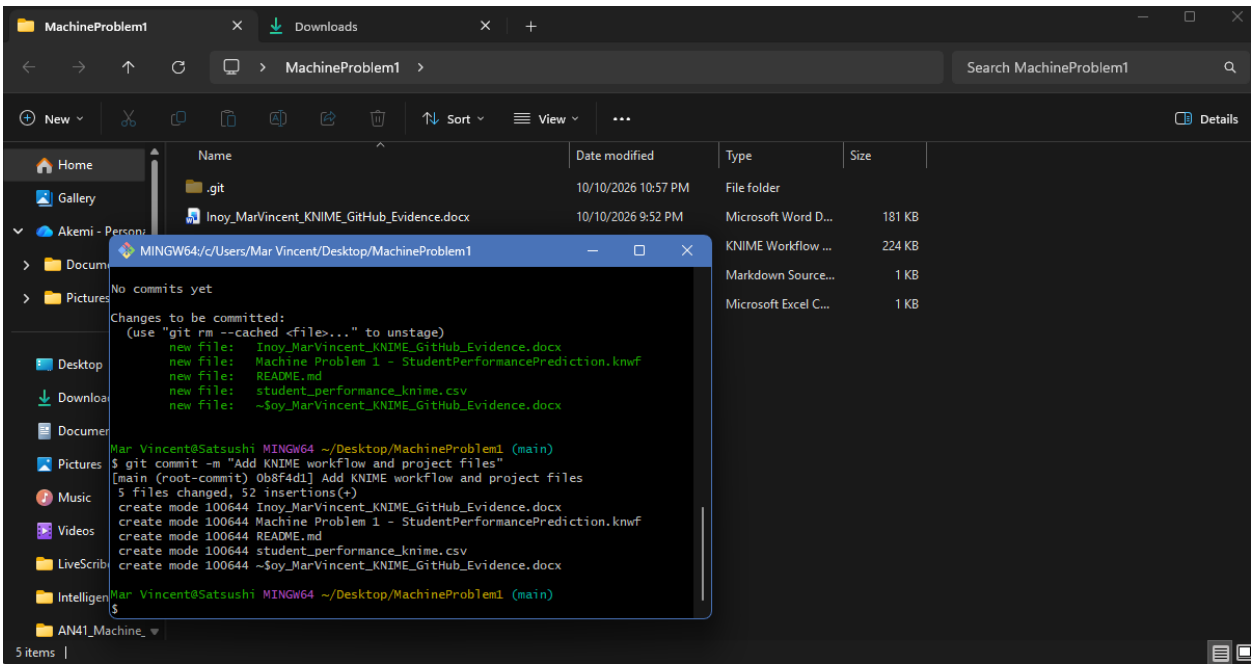

Now we initialized with git init

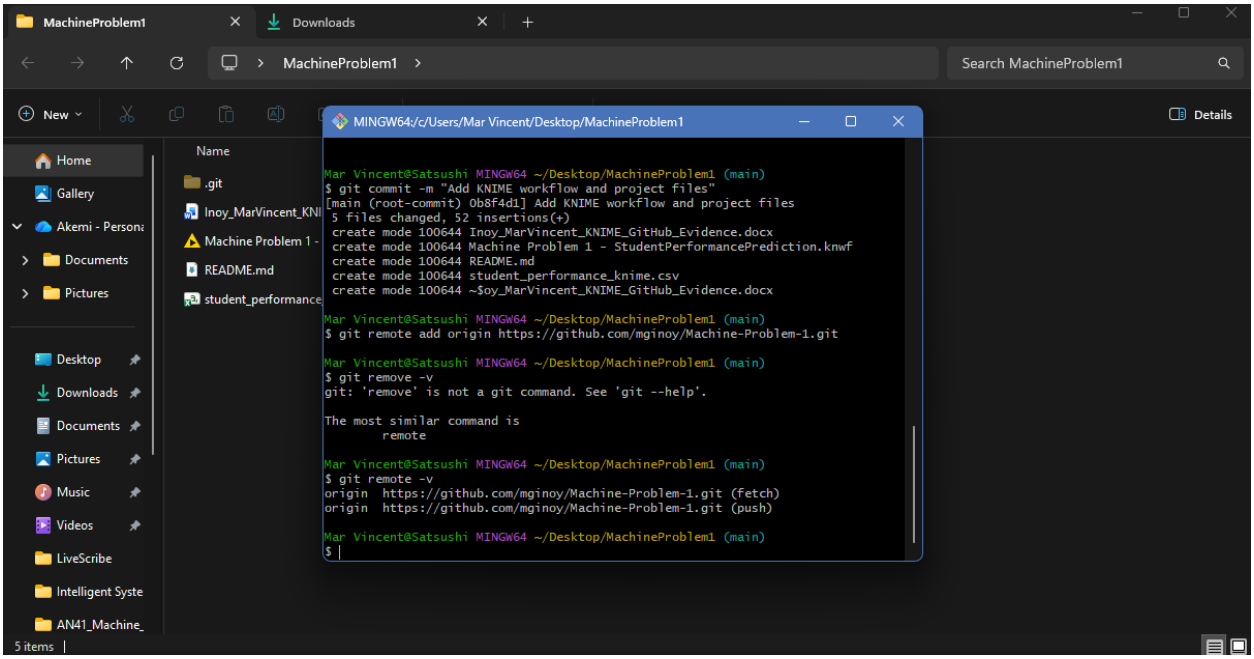

Changed git branch then changed its current status

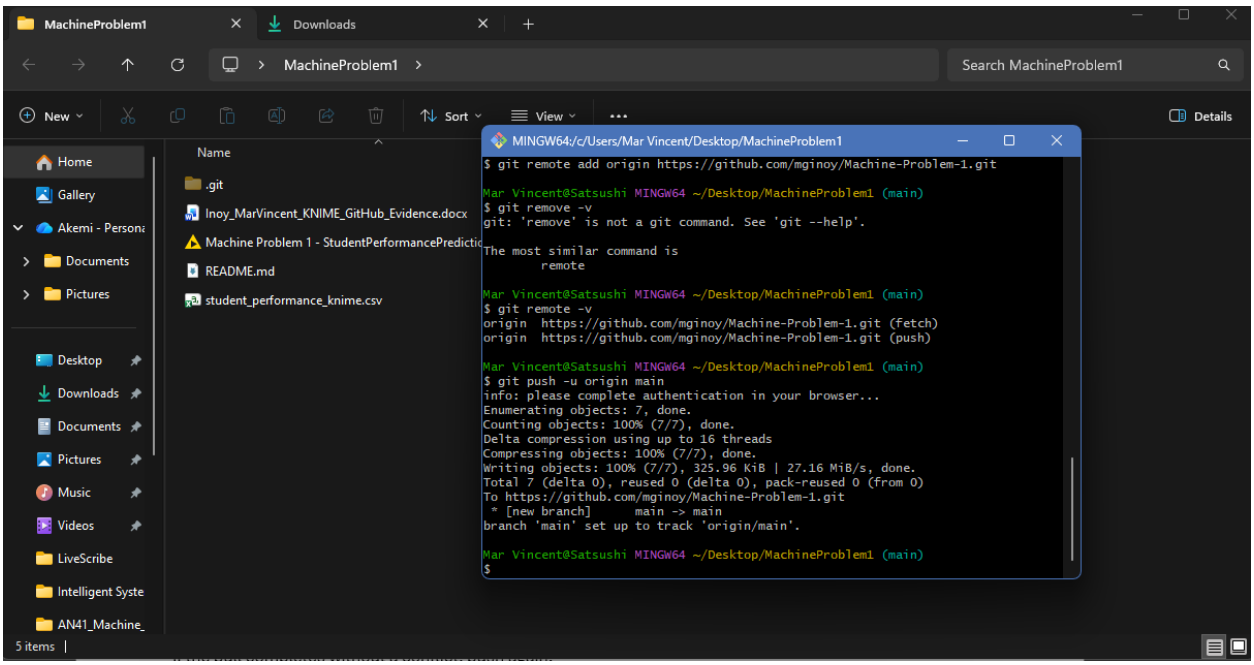

Used git add . then chcked git status again.

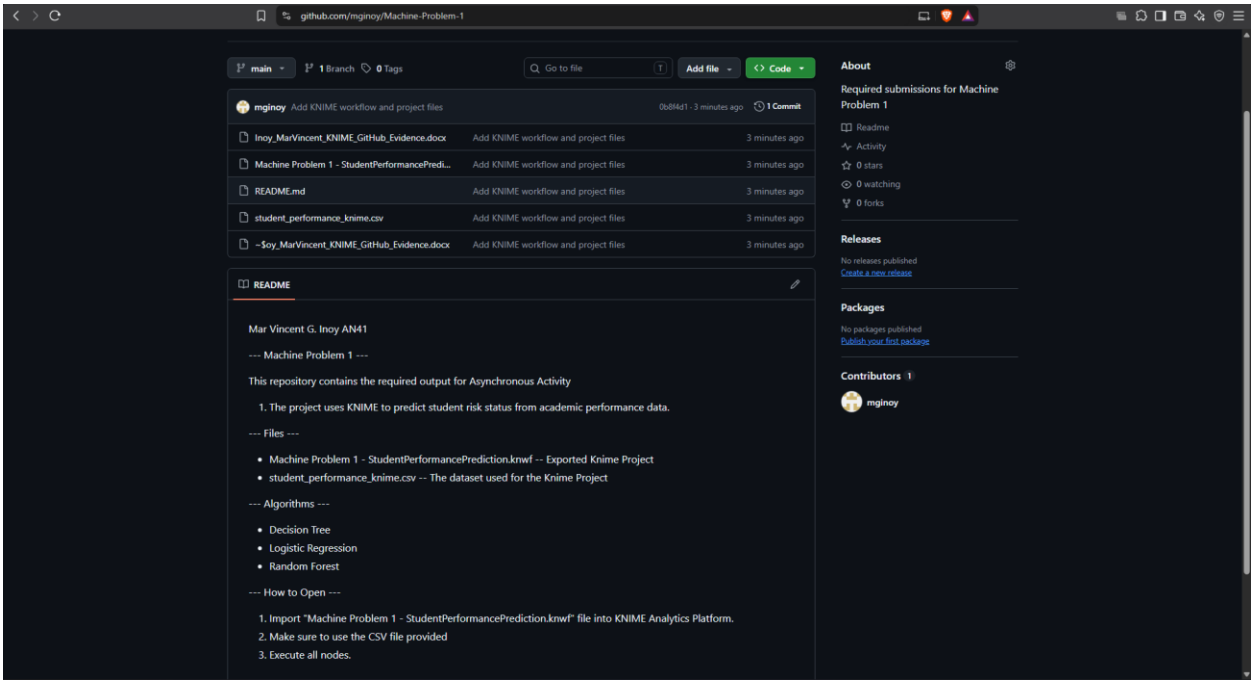

This part we committed the files

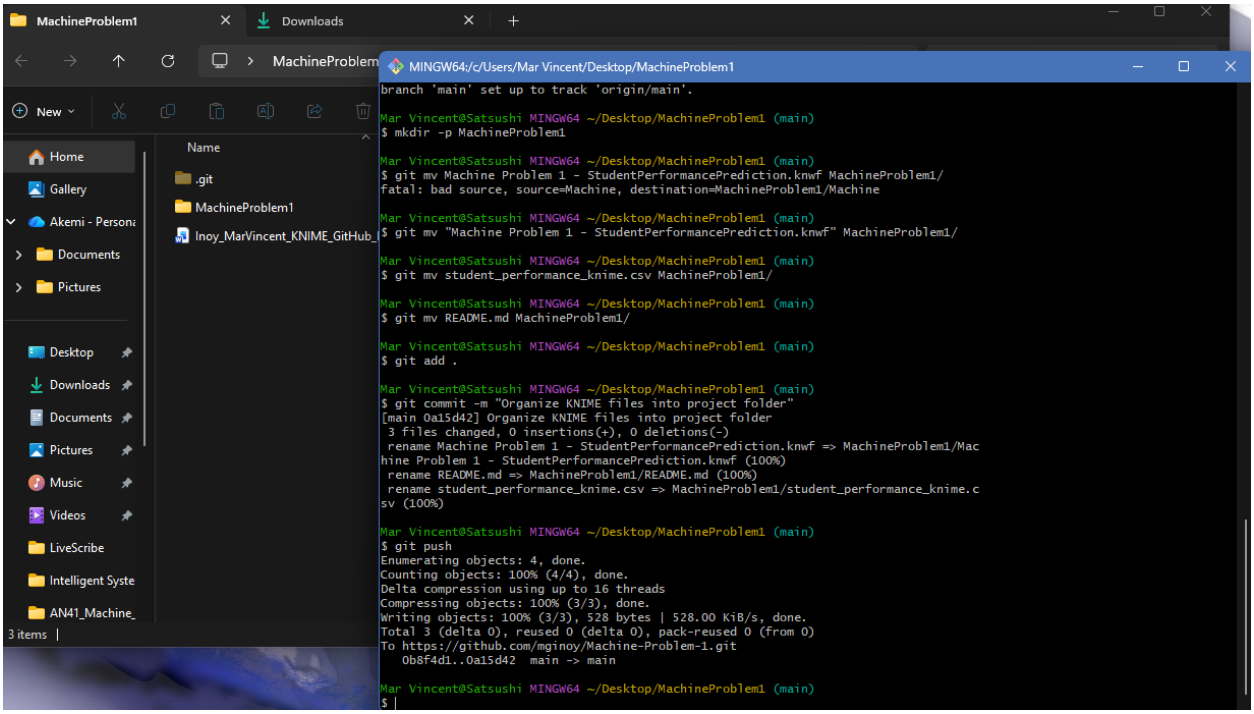

Remote added

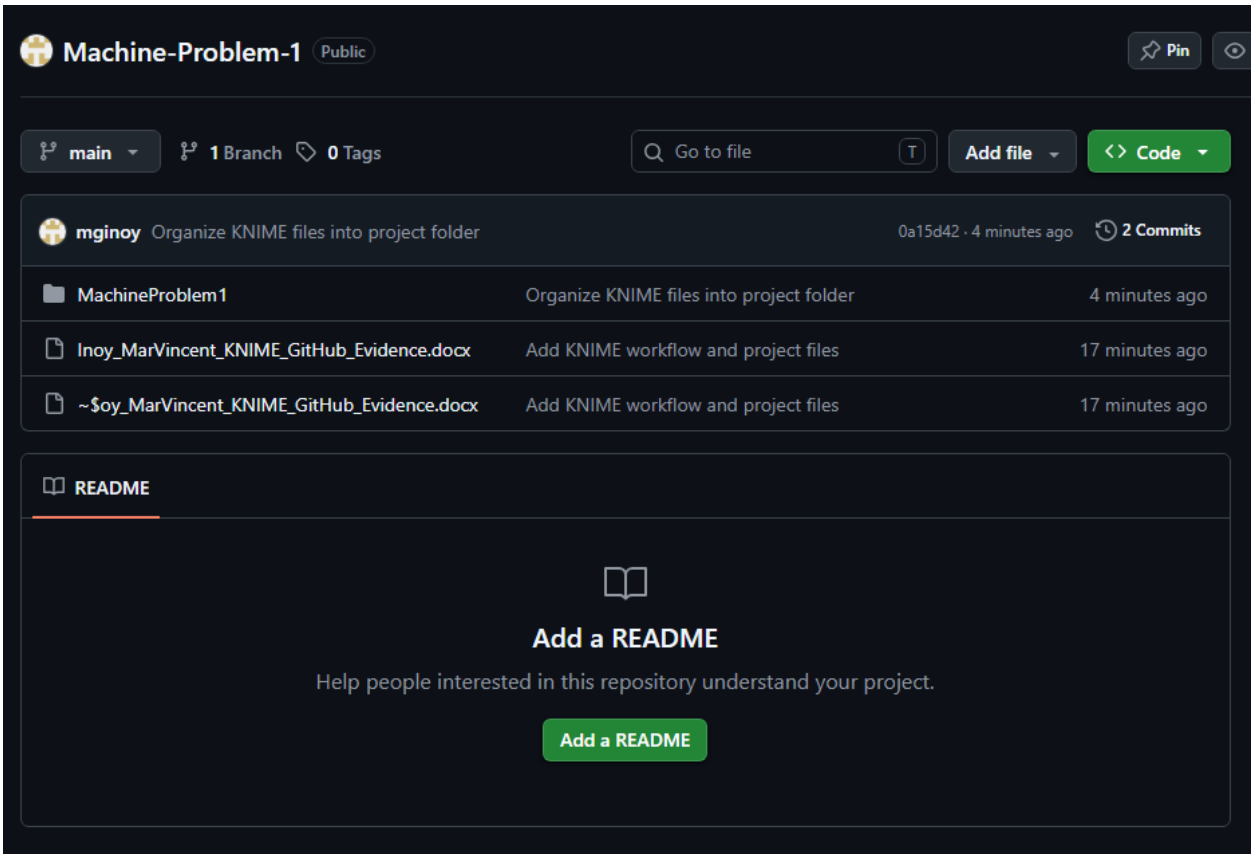

Finally pushing to github for the files to appear in github

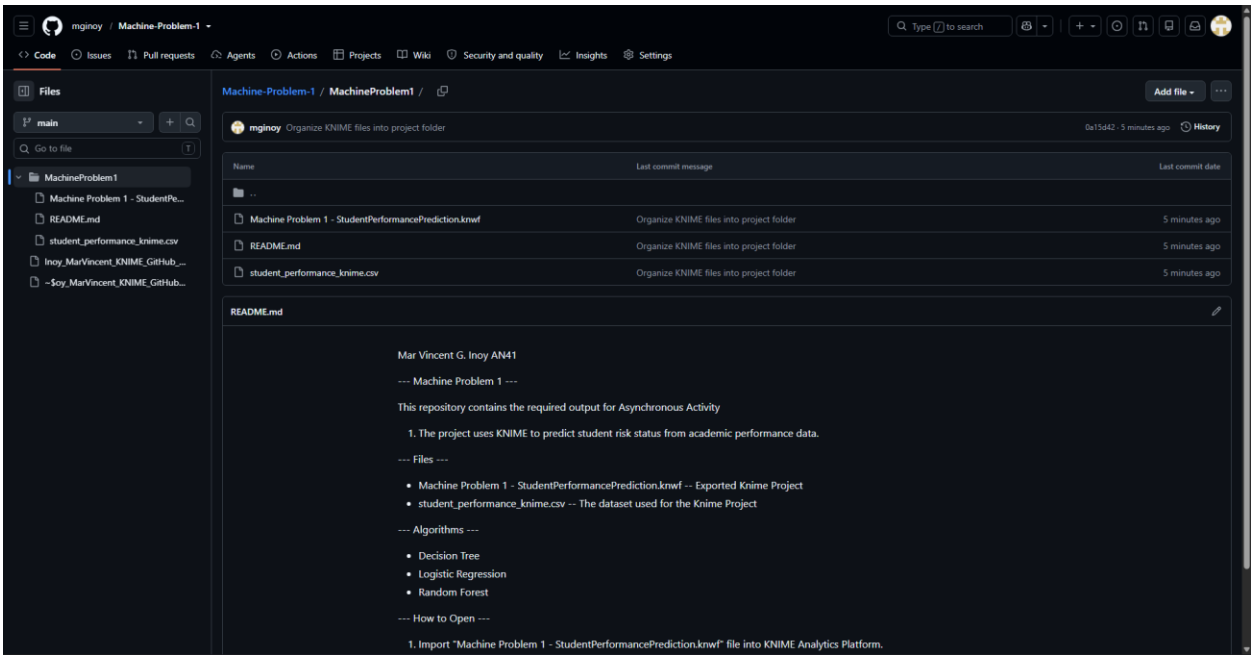

Files are now in github

Organized the files in this part

Organized Now
